

NIA Website

Technology Stack & Tools Reference

The following six tools form the complete technology stack required to build, deploy, and operate the NIA website. Each tool has been selected for reliability, scalability, and cost-effectiveness.

01

Claude (Anthropic)

AI / Language Model

Powers intelligent features across the NIA website — from automated content generation and chatbot support to smart search and personalised user interactions.

Key Uses:

- AI-powered chatbot & user assistance
- Content drafting and summarisation
- Intelligent FAQ and query resolution

02

Domain

Web Infrastructure

Provides the official web address (URL) for the NIA platform, establishing a credible online identity and enabling users to locate the site reliably.

Key Uses:

- Custom domain registration (e.g. nia.org.in)
- DNS management and routing
- SSL/TLS certificate binding

03

Render

Cloud Hosting & Deployment

Hosts and serves the NIA web application with automatic deployments from Git, zero-downtime releases, and built-in scaling — removing the need for manual server management.

Key Uses:

- Backend API and web server hosting
- Automated CI/CD pipelines
- Environment variable and secrets management

04

MongoDB Atlas*Database (NoSQL)*

Stores and manages all dynamic data for the NIA website — including user profiles, event records, membership details, and content — in a flexible, scalable cloud database.

Key Uses:

- User and membership data storage
- Event and programme records
- Full-text search across content

05

AWS S3*Cloud Object Storage*

Handles reliable, cost-effective storage and delivery of all static assets and user-uploaded files such as images, documents, certificates, and media.

Key Uses:

- Profile pictures and media uploads
- Document and certificate storage
- Static asset hosting with CDN integration

06

Stripe*Payment Processing*

Enables secure online payment collection for membership fees, event registrations, donations, and other transactions with full compliance and fraud protection.

Key Uses:

- Membership subscription billing
- One-time event and course payments
- Automated receipts and invoicing

Quick-Reference Summary

01	Claude (Anthropic)	AI / Language Model
02	Domain	Web Infrastructure
03	Render	Cloud Hosting & Deployment
04	MongoDB Atlas	Database (NoSQL)
05	AWS S3	Cloud Object Storage

06	Stripe	Payment Processing
